

**Cover with style for
the environment**

autoform

We care about the environment.

Our philosophy is to follow the guide lines within the automotive industry by using 100 % recyclable materials in all included components. All our canopies are made in a high quality, thermo formed ABS. The production process by Autoform is in line with all recommended, environmental demands. We care about the environment, our customers and our employees.

Quality and security commitments.

The objective by Autoform is to fulfil the quality level demanded within the international automotive industry. A high level of quality is an outspoken commitment in our company. Autoform is certified due to **ISO-14001** and **TS-16949**.

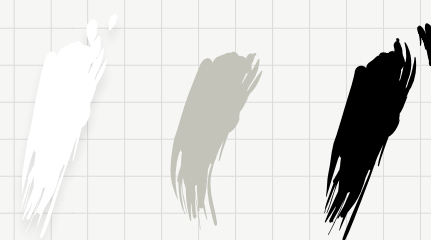

Manufacturing and development.

All production and development is located to Malung in Sweden where we have a long time experience within vacuum forming of thermo plastic materials. All our parts are developed in cooperation with leading car manufacturers by using a number of CAD-programmes. Our aim is to supply superior products with short lead times.

Design and function.

All our models are tailor made to each and every vehicle model in order to provide optimal adaption and function. The canopies are equipped with an extra inner roof by using a sandwich construction, this guarantees optimal stability and safety. We are using carefully selected suppliers for all included components in order to be sure about the quality and the safety aspects.

The large, dark tinted pop up windows gives an exclusive impression. The ABS-material in white, silver and black has a metallic-look surface with an additional acrylic coating. We are also able to supply canopies painted to specific colour codes. Mounting clamps in aluminium provides a rapid and simple assembling to the vehicle. The windows are equipped with double, rotating locks. Dome and brake light is standard. Rails can be supplied as an option.
